## Detailed Findings:

Analysis and Comments	Result	Units	Rpt. Limit	Specimen Source	Analysis By
Phencyclidine	56	ng/mL	5.0	001 - Cavity Blood	GC/MS

Other than the above findings, examination of the specimen(s) submitted did not reveal any positive findings of toxicological significance by procedures outlined in the accompanying Analysis Summary.

## Reference Comments:

## 1. Phencyclidine (Angel Dust; PCP; Sperm) - Cavity Blood:

Phencyclidine (PCP) is a DEA Schedule II controlled dangerous hallucinogenic drug. There exists a dearth of pharmacokinetic data of PCP usage in humans; however it has been reported that blood levels of phencyclidine ranged from 7 - 240 ng/mL (mean, 75 ng/mL) in individuals stopped for driving under the influence of drugs or for being intoxicated in public.

Ataxia, agitation, combativeness, seizures, spasticity, coma and respiratory depression are associated with phencyclidine concentrations ranging from 90 - 220 ng/mL plasma.

The physiological effects of PCP can be classified as low or high dose. In low doses, PCP can elicit visual disturbances, drowsiness, agitation, hallucinations, aggressiveness, increased pulse rate and blood pressure, bronchospasm, increased respiratory rate and hyperthermia. In high doses, PCP can elicit convulsions, opisthotonos, coma, arrhythmias, decreased blood pressure and respirations and rhabdomyolysis.

There appears to be no relation between plasma levels of phencyclidine and degree of intoxication. Even so, death has been reported following the use of only 120 mg of phencyclidine. Blood concentrations in phencyclidine-related fatalities have been reported to range from 300 - 25000 ng/mL (mean, 5000 ng/mL).

Unless alternate arrangements are made by you, the remainder of the submitted specimens will be discarded one (1) year from the date of this report; and generated data will be discarded five (5) years from the date the analyses were performed.

## Analysis Summary and Reporting Limits:

All of the following tests were performed for this case. For each test, the compounds listed were included in the scope. The Reporting Limit listed for each compound represents the lowest concentration of the compound that will be reported as being positive. If the compound is listed as None Detected, it is not present above the Reporting Limit. Please refer to the Positive Findings section of the report for those compounds that were identified as being present.
